

## **Install Performers**

Some performer types are not included in the Limnor setup file, Limnor.msi. For example, performers related to Microsoft Office are packaged in Office.cab file, InternetPhone performer is packaged in IPPhone.cab file. All performers developed by third-parties of course will not be in the Limnor setup file. To install such performers, please follow the instructions in this document.

1. Open “Project | Performer types...” menu
2. Click New button
3. Click Browse button
4. Find the file containing the Limnor performer types. A Limnor performer type must be in a DLL file. If other support files are needed, all files will be packed in a CAB file. The vendor shipping the performer types should tell you which file to look for.
5. The DLL files containing performer types will be listed. You make selections in the list as a way to confirm the installation.
6. Click “Use selected type files” button
